PROFESSIONAL SUMMARY

Detail-oriented Sr. Data Analyst with expertise in SQL, Python, Power BI, Tableau and cloud data platforms (Azure, Snowflake, AWS). Experienced in building reporting layers, dashboards, and data models to support financial and operational analysis. Strong background in data cleaning, validation, and quality assurance to ensure reliable insights. Proven ability to translate complex data into clear business-driven recommendations. Deep understanding of Data Warehousing concepts, Data Modeling (ER diagrams, logical/physical models), and ETL architecture.

PROFESSIONAL EXPERIENCE

Love's Travel Stop's & Country Store's

Oklahoma City, OK

Sr. Data Analyst

April 2024 - Present

- Led enterprise inventory, sales, pricing, and product performance analysis across 150+ reporting locations and 900+ operational sites, helping Supply Chain, Finance, Truck Care, Retail Operations, and Store Operations improve inventory visibility, margin tracking, and product-level decision-making.
- Developed Snowflake SQL-based analytical datasets to investigate BOH discrepancies, excess inventory, stock aging, low-performing SKUs, sales anomalies, margin leakage, and replenishment exceptions, reducing issue-resolution turnaround by approximately 25%–40%.
- Supported SAP ECC/BW to Snowflake reporting modernization by performing source-to-target validation, row-count reconciliation, duplicate checks, null checks, product/site mapping validation, and metric tie-outs across inventory, sales, pricing, and product master datasets.
- Partnered with Data Engineering teams to validate Fivetran/HVR ingestion outputs, dbt transformation logic, Snowflake reporting views, CDC-related changes, refresh timing, and KPI calculations, improving trust in downstream Tableau, Power BI, SSRS, and Excel reporting.
- Built and enhanced executive and operational dashboards in Tableau, Power BI, SSRS, and Excel to monitor BOH, sales, turns, months of supply, stock availability, aging inventory, variance to plan, margin %, vendor/category trends, and store/DC inventory alignment.
- Automated recurring inventory, sales, and reconciliation workflows using Excel XLOOKUP, PivotTables, Power Query-style transformations, Macros/VBA, SQL, and Python-based validation concepts, reducing manual reporting effort by 30%+.
- Translated complex SAP, Snowflake, and operational data into business-ready insights that helped stakeholders identify overstock exposure, obsolete inventory, product setup issues, pricing inconsistencies, vendor return opportunities, and replenishment misalignment.
- Created standardized KPI definitions, reporting logic, validation rules, transformation assumptions, and data-quality documentation to strengthen reporting governance, reduce recurring clarification requests, and improve long-term maintainability.
- Conducted root-cause analysis across SAP source data, Snowflake views, dbt logic, SSRS reports, Tableau calculations, Power BI measures, and Excel files to determine whether reporting issues came from source data, refresh timing, mapping logic, business rules, or visualization logic.
- Collaborated with Finance, Supply Chain, Procurement, Merchandising, Truck Care, Retail Operations, and Data Engineering teams to convert business problems into scalable reporting solutions, analytical models, and actionable recommendations.

Sage IT

Dallas, Tx

Programmer Data Analyst I

May 2022 – April 2024

- Supported cloud data engineering and analytics initiatives by integrating structured and semi-structured data from PostgreSQL, SQL Server, Azure SQL, APIs, Excel/CSV files, and enterprise reporting systems into Azure-based analytical environments.
- Developed and maintained data workflows using Azure Data Factory, ADLS Gen2, Azure Databricks, PySpark, Python, SQL, Azure SQL, and SHIR, supporting ingestion, transformation, validation, and reporting across business and operational datasets.
- Worked with bronze, silver, and gold data layer concepts to help convert raw source data into cleaned, standardized, and curated datasets used for dashboards, reporting, and business analysis.
- Wrote complex SQL queries for data extraction, transformation, reconciliation, duplicate detection, null checks, schema validation, and performance optimization across cloud and relational database environments.
- Built and optimized Python and PySpark-based transformation logic to clean inconsistent records, standardize data types, handle missing values, remove duplicates, and prepare business-ready datasets for downstream reporting.
- Performed source-to-target validation, row-count reconciliation, schema checks, anomaly detection, and exception reporting to improve data reliability and reduce recurring reporting defects by approximately 25%–35%.
- Built and maintained Power BI, Tableau, SSRS, and Excel dashboards to track workforce utilization, project delivery, payroll allocation, client workload, operational KPIs, training participation, and business performance trends.
- Automated recurring reporting and analytical workflows using Python, SQL, Excel, XLOOKUP, PivotTables, and Macros/VBA-supported processes, reducing manual reporting effort by approximately 30%–40%.

- Partnered with business stakeholders, project managers, delivery leads, BI teams, and data engineers to gather requirements, define KPI logic, validate dashboard outputs, and deliver scalable reporting solutions.
- Worked in Agile/Scrum environments using Jira, Confluence, documentation, and UAT cycles to support modernization projects, improve reporting consistency, and deliver analytics solutions under tight timelines.

Hudl

Data Analyst

India
Sept 2020 – Dec 2021

- Analyzed large-scale sports performance, player statistics, video-derived event data, match trends, and team-level datasets to generate insights on player efficiency, game strategy, opponent preparation, and team performance.
- Worked with structured sports analytics data including match IDs, player IDs, team IDs, timestamps, action tags, possession sequences, scoring events, defensive actions, substitutions, and player involvement details.
- Developed SQL-based analytical datasets by joining video event logs, player rosters, match metadata, team information, opponent data, and historical performance records for reporting and dashboard development.
- Built and optimized SQL queries and transformations using Databricks and SQL Server to process high-volume event-level and player-level datasets, improving reporting efficiency by 30%+.
- Designed and maintained Power BI semantic models and reporting layers that enabled coaches, analysts, and internal teams to review player performance, possession trends, shot conversion, defensive contribution, turnover rate, and match-period performance.
- Developed interactive dashboards in Power BI and Tableau to visualize player efficiency, scoring contribution, assist contribution, opponent trends, team comparisons, game-period performance, and tactical opportunities.
- Performed data profiling, cleansing, timestamp validation, duplicate detection, player-event mapping validation, and anomaly checks to improve accuracy and trust in sports analytics dashboards.
- Validated consistency between video metadata, tagged event data, match timelines, and final BI outputs to reduce reporting errors and improve confidence in performance metrics.
- Collaborated with product, analytics, and engineering teams to gather reporting requirements, define sports KPIs, validate dashboard outputs, and support UAT cycles.
- Documented data lineage, transformation logic, KPI definitions, reporting assumptions, and validation steps to improve transparency and maintainability across sports analytics workflows.

Smart Knewer

Data Scientist

India
August 2018 – Sept 2020

- Analyzed learner engagement, course performance, LMS activity, assessment, enrollment, and student progress data to identify trends in completion rates, dropout risk, learner retention, and content effectiveness.
- Extracted and analyzed student-level and course-level datasets using SQL from LMS records, activity logs, course enrollment tables, quiz scores, module completion data, attendance records, and feedback forms.
- Used Python, Pandas, NumPy, SQL, and Excel to clean data, handle missing values, remove duplicates, standardize fields, convert data types, and create analytical features for reporting and exploratory analysis.
- Created derived metrics such as engagement score, attendance percentage, average quiz score, assignment submission rate, module completion rate, course progress percentage, and learner risk category.
- Developed Tableau dashboards and Excel reporting models to track enrollment trends, active learners, course progress, assessment performance, dropout rate, completion rate, engagement level, and student retention.
- Used Tableau calculated fields, filters, drilldowns, dashboard actions, and course/batch-level views to support self-service reporting for instructors, program managers, and operations teams.
- Conducted data quality checks including duplicate detection, missing-value review, outlier checks, LMS export validation, and reconciliation between raw datasets and final dashboards.
- Applied basic machine learning techniques including logistic regression, decision trees, clustering, train-test split, confusion matrix, accuracy, precision, recall, and feature importance to analyze student success and dropout indicators.
- Supported A/B-style course content analysis by comparing engagement, completion, and assessment behavior across different learning modules and instructional formats.
- Delivered ad hoc reports, dashboard summaries, and data-driven recommendations to help improve course completion rates, learner support strategies, and curriculum effectiveness.

EDUCATION

- | | | |
|----------------------------|---|---------------------|
| • Wichita State University | MS in Data science GPA: 3.9/4 | Graduated: May 2023 |
| • Amrita University | Bachelor Electronics & Communication GPA: 3/4 | Graduated: May 2020 |

ACADEMIC PROJECTS

- **Kansas Dept. Broadband Dev:** Developed a broadband accessibility analytics project using Python, SQL, Tableau, and Power BI to analyze 200K+ household profiles, demographic attributes, regional service availability, income indicators, rural/urban patterns, and infrastructure-readiness variables. Built forecasting and classification models including linear regression, logistic regression, decision trees, Ridge, and Lasso to identify underserved regions and prioritize broadband expansion opportunities.

Created dashboards showing coverage gaps, accessibility scores, priority zones, and resource-allocation recommendations. Reduced manual planning cycle time from approximately 2 weeks to 3 days through reproducible analytics and evidence-based planning.

- **Customer Churn Prediction & Retention Analytics:** Designed a churn prediction project using **Python, SQL, Pandas, NumPy, Scikit-learn, and BI-ready reporting outputs** to identify customers at risk of leaving based on transaction history, service usage, support tickets, billing behavior, tenure, complaints, and engagement frequency. Created features including purchase frequency, recency, total spend, average usage, complaint count, delayed payments, tenure, and engagement score. Compared classification models such as **logistic regression, decision tree, random forest, and XGBoost-style models** using precision, recall, F1-score, ROC-AUC, and confusion matrix. Delivered churn-risk scoring and customer segmentation outputs to support retention campaigns and revenue-protection strategies.
- **Student Performance & Learning Outcome Prediction:** Built a machine learning project using Python, SQL, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, and BI visualization concepts to analyze student activity logs, attendance, assessment scores, quiz attempts, course progress, and engagement behavior. Engineered features such as attendance percentage, quiz average, assignment submission rate, engagement score, course progress percentage, and completion status. Trained and evaluated models including logistic regression, decision trees, random forest, and SVM-style classifiers using accuracy, precision, recall, F1-score, and confusion matrix. Identified key drivers of learner success and dropout risk to support targeted intervention strategies.

PROFESSIONAL SKILLS

- **Data Analysis & Programming:** SQL, Python (Pandas, NumPy), Excel (Advanced – Pivot Tables, VLOOKUP, Data Analysis)
- **Data Visualization & Reporting:** Power BI (DAX, Semantic Models), Tableau (Dashboards, LODs), Excel Reporting, SSRS
- **Data Platforms & Databases:** Snowflake, PostgreSQL, SQL Server, Azure SQL, Redshift
- **Data Engineering & Processing:** Azure Databricks (PySpark), Azure Data Factory, ETL/ELT Pipelines, Data Transformation
- **Cloud Technologies:** Microsoft Azure (Data Lake, Databricks, Data Factory), AWS (S3, Redshift)
- **Data Modeling & Warehousing:** Data Modeling (Star Schema), Data Warehousing, Data Marts, KPI Design
- **Data Quality & Governance:** Data Validation, Data Profiling, Data Quality Checks, Data Lineage
- **Tools & Collaboration:** Jira, Confluence, Agile (Scrum), UAT, BRD Documentation
