

Vineeth Inturi

+1(803)833-9653 | vineethinturi98@gmail.com | [in LinkedIn](#) | [📍 Oklahoma City, OK](#)

PROFESSIONAL SUMMARY

Detail-oriented Sr. Data Analyst with expertise in SQL, Python, Power BI, Tableau and cloud data platforms (Azure, Snowflake, AWS). Experienced in building reporting layers, dashboards, and data models to support financial and operational analysis. Strong background in data cleaning, validation, and quality assurance to ensure reliable insights. Proven ability to translate complex data into clear business-driven recommendations. Deep understanding of Data Warehousing concepts, Data Modeling (ER diagrams, logical/physical models), and ETL architecture.

PROFESSIONAL SKILLS

- **Data Analysis & Programming:** SQL, Python (Pandas, NumPy), Excel (Advanced – Pivot Tables, VLOOKUP, Data Analysis)
- **Data Visualization & Reporting:** Power BI (DAX, Semantic Models), Tableau (Dashboards, LODs), Excel Reporting, SSRS
- **Data Platforms & Databases:** Snowflake, PostgreSQL, SQL Server, Azure SQL, Redshift
- **Data Engineering & Processing:** Azure Databricks (PySpark), Azure Data Factory, ETL/ELT Pipelines, Data Transformation
- **Cloud Technologies:** Microsoft Azure (Data Lake, Databricks, Data Factory), AWS (S3, Redshift)
- **Data Modeling & Warehousing:** Data Modeling (Star Schema), Data Warehousing, Data Marts, KPI Design
- **Data Quality & Governance:** Data Validation, Data Profiling, Data Quality Checks, Data Lineage
- **Tools & Collaboration:** Jira, Confluence, Agile (Scrum), UAT, BRD Documentation

PROFESSIONAL EXPERIENCE

Love's Travel Stop's & Country Store's

Oklahoma City, OK

Sr. Data Analyst

April 2024 - Present

- Led analysis of inventory, sales, and product performance across 150+ reporting locations and 900+ operational sites, supporting Supply Chain, Finance, and Operations with insights for stock optimization and business decision-making.
- Partnered with Finance, Operations, Supply Chain, and Data Engineering teams to deliver KPI reporting on inventory health, margin impact, stock aging, replenishment trends, and product-level issues across 2k+ of SKUs.
- Extracted and integrated complex datasets from SAP ECC, SAP BW, Snowflake, and operational systems to support recurring and ad hoc analysis of inventory movement, sales trends, BOH exceptions, and product performance.
- Supported SAP ECC/BW to Snowflake migration by conducting source-to-target validation, reconciliation, and business-rule checks, improving data accuracy and consistency across reporting datasets.
- Performed regular data quality checks, integrity audits, and reconciliation processes between SAP source data and Snowflake outputs, strengthening database reliability and improving confidence in inventory and financial reporting used by leadership teams.
- Worked with the Data Engineering team on ingestion and transformation workflows using Fivetran / HVR, Snowflake, and dbt to prepare reliable analytical datasets and reporting models for inventory, finance, and supply chain use cases.
- Developed and optimized advanced SQL queries in Snowflake to analyze BOH discrepancies, excess inventory, low-performing SKUs, sales anomalies, and product mapping issues, enabling faster issue resolution and more proactive inventory management.
- Built and maintained Tableau and Power BI dashboards, along with SSRS and Excel-based reports, to monitor KPIs such as BOH, sales, turns, stock availability, stock aging, variance to plan, and margin %, while supporting daily, weekly, and monthly reporting automation.
- Applied advanced Excel skills including XLOOKUP, PivotTables, text/data parsing, and Macros to cleanse, standardize, and automate large inventory and sales datasets from multiple source systems, reducing manual effort and improving reporting turnaround time.
- Prepared business-ready models and analytical datasets for finance and supply chain reviews, analyzing thousands of SKUs and resolving duplicate records, mapping gaps, and anomalous sales/inventory patterns through root-cause analysis and process improvement.

Sage IT

Dallas, Tx

Programmer Data Analyst I

May 2022 – April 2024

- Performed data analytics and multi-source data integration using structured and semi-structured data from enterprise systems, APIs, and cloud platforms to support reporting and business intelligence initiatives.
- Wrote complex and advanced SQL queries for data extraction, transformation, validation, reconciliation, and performance optimization across PostgreSQL, Azure SQL, and enterprise reporting environments.
- Built and maintained Tableau, Power BI, and SSRS dashboards to deliver insights on operational KPIs, system performance, business trends, and analytical metrics.
- Developed and optimized data workflows using Python, Databricks, and PySpark, improving data processing efficiency, transformation scalability, and analytics readiness.
- Assisted business stakeholders in defining reporting requirements, building dashboard logic, and converting business questions into clear analytical views and BI solutions.

- Supported cloud and legacy modernization projects by validating transformed datasets, reconciling outputs, and ensuring accurate reporting across source and target systems.
- Implemented data quality, anomaly detection, validation rules, and exception reporting to improve the reliability and usability of dashboards and analytical outputs.
- Automated recurring reporting and analytical workflows using Python and SQL, reducing manual effort and improving turnaround time, consistency, and auditability.
- Worked in Agile delivery environments to present insights, support stakeholder decisions, and deliver scalable reporting and analytics solutions under tight timelines.

Hudl India
Data Analyst Sept 2020 – Dec 2021

- Analyzed large-scale sports performance and tracking datasets, generating insights on player performance, match trends, and team strategy optimization.
- Designed and maintained Power BI reporting layers and semantic models, enabling coaches and analysts to explore game insights through intuitive dashboards.
- Built and optimized SQL queries and transformations (Databricks, SQL Server) to process high-volume event and tracking data, improving reporting efficiency by 30%+.
- Developed interactive dashboards in Power BI and Tableau, visualizing key metrics such as player efficiency, game performance trends, and team comparisons.
- Integrated data from multiple sources including video metadata, player tracking systems, and match statistics, ensuring consistency across reporting layers.
- Implemented data quality checks and validation frameworks, including anomaly detection and reconciliation logic to ensure accuracy of sports analytics metrics.
- Performed data profiling, cleansing, and standardization, improving reliability and usability of raw event and tracking data.
- Collaborated with product, analytics, and engineering teams to gather requirements, define reporting metrics, and support UAT validation cycles.
- Supported predictive analytics initiatives, including player performance trends and game outcome analysis using SQL and BI tools.
- Documented data lineage, transformation logic, and reporting definitions, improving transparency and governance across analytics workflows.
- Delivered insights in Agile environments, enabling data-driven decisions for player development, game strategy, and product enhancements.

Smart Knewer India
Data Scientist August 2018 – Sept 2020

- Analyzed learner and course engagement data to generate insights on student performance, completion rates, and content effectiveness
- Developed interactive Tableau dashboards to track KPIs such as enrollment trends, course progress, assessment scores, and user retention
- Wrote optimized SQL queries to extract, clean, and analyze large datasets from learning management systems (LMS) and student activity logs
- Performed data cleaning, transformation, and exploratory analysis using Python (Pandas, NumPy) to identify trends and improve data reliability
- Built Excel-based reporting models and dashboards, enabling stakeholders to monitor program performance and operational metrics
- Designed self-service reporting solutions in Tableau, allowing instructors and program managers to perform ad-hoc analysis on student outcomes
- Conducted data validation and quality checks, ensuring accuracy and consistency across reporting datasets and dashboards
- Created ad-hoc reports and performance summaries to support curriculum improvements and decision-making
- Utilized Tableau advanced features (calculated fields, LOD expressions, filters, drill-downs) to deliver deeper insights into student behavior and engagement
- Collaborated with cross-functional teams (content creators, instructors, and operations) to gather requirements and define reporting metrics.
- Identified patterns in student engagement and performance, providing data-driven recommendations to improve course completion rates and learning outcomes.
- Supported A/B analysis and performance tracking for course content and learning modules

EDUCATION

- | | | |
|----------------------------|---|---------------------|
| • Wichita State University | MS in Data science GPA: 3.9/4 | Graduated: May 2023 |
| • Amrita University | Bachelor Electronics & Communication GPA: 3/4 | Graduated: May 2020 |
